

# PVC Sheet, Trim Board & Moulding Storage Guide

---

Green Atlantic PVC trim, sheet and Moulding products should be stored on a flat and level surface. PVC products are more flexible than wood, they may deform on uneven surfaces. Ensure that storage areas, as well as all framing and substructures, are flat and level to minimize uneven surfaces .

Products are shipped with a protective covering. If the covering has been removed, take care to keep the product free of dirt and debris at the jobsite. If the product gets dirty, clean after installation. Care should be taken to avoid damage to the ends, edges and surfaces.

Green Atlantic PVC trim, sheet and Moulding products should be covered when stored outside. Keep products off the ground and dry as excessive moisture pickup from improper storage may affect the performance of the products. Do not stack material in excess of 3 units high.

For job site storage, the material should be placed on stringers and covered, preferably on concrete, asphalt, or a similar surface. For all other instances, a tarp should be placed over the ground cover under the stringers, with the material still under cover.
